PROFESSIONAL SUMMARY

Software engineer with a B.S. in Computer Science focused on full-stack, backend, and applied AI systems. Led a Gulfstream Aerospace capstone team developing an AI-powered 3D asset-generation platform that reduced successful initial draft generation from multi-hour workflows to under 5 minutes. Built additional systems spanning REST APIs, PostgreSQL data modeling, containerized deployment, and local RAG/LLM workflows using Python, Java, PostgreSQL, React, and Docker.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL | **Backend:** Django, FastAPI, MCP, Spring Boot, REST APIs
Frontend: React, CSS, Three.js | **Data / Tools:** PostgreSQL, Docker, Git/GitHub, Blender, Unreal Engine 5

EDUCATION

Georgia Southern University - Statesboro, GA

May 2026

Bachelor of Science in Computer Science

EXPERIENCE

AI Model Generation Team Lead – Capstone

Jan 2026 - May 2026

Gulfstream Aerospace Corporation

Savannah, GA

- Led a 5-person team developing an AI-powered 3D asset-generation platform using FastAPI, React, Three.js, Blender, and Unreal Engine 5, translating Gulfstream stakeholder and 3D designer requirements into generation, mesh-processing, visualization, and engine-integration workflows.
- Integrated TRELIS, TripoSR, and ModelsLab across local and cloud text-to-3D/image-to-3D workflows, reducing successful initial 3D draft generation from multi-hour manual workflows to under 5 minutes.
- Designed Blender normalization, glTF 2.0 compatibility handling, interactive mesh inspection, and Unreal Engine 5 integration for grounding, scale/orientation correction, materials, metadata validation for exporting.

Student Assistant (Lead)

Sep 2022 - Dec 2023

Georgia State University (Piedmont North)

Atlanta, GA

- Led and trained a 10+ member dining-services team during high-volume operations, maintaining service quality, inventory availability, punctuality, and safety compliance.

PROJECTS

Trainline | React, Django REST Framework, PostgreSQL, Docker

Aug 2025 - Present

- Designed and containerized a full-stack train-booking platform supporting seven end-to-end workflows.
- Built RESTful CRUD APIs and relational data models; hardened deployment with authorization, input validation, secret management, security headers, and Docker configuration.

meeting-to-tasks | FastAPI, FAISS, Ollama, GitHub REST API

Aug 2025

- Built a local-first meeting intelligence application that indexes transcripts into source-grounded, reviewable task drafts and optionally publishes approved issues to GitHub.
- Exposed shared retrieval and extraction services through FastAPI REST endpoints and MCP tools using Sentence Transformers, FAISS, local Phi-3 Mini inference via Ollama, SQLite persistence, and GitHub REST API.

Flight Booking Web App | Spring Boot, PostgreSQL, HTML/CSS

Aug 2024

- Built a Spring Boot booking application backed by a normalized PostgreSQL schema for users, flights, seats, bookings, and authentication, enforcing relational integrity with primary and foreign-key constraints.

LEADERSHIP

Vice President

Aug 2025 - May 2026

Association for Computing Machinery (ACM), Georgia Southern University

Statesboro, GA

- Led planning and execution of ACM events and hackathons serving 150+ students, coordinating chapter activities, technical events, and university outreach.
- Represented ACM at organization fairs and the Technical Day Career Showcase, demonstrating a QR scavenger hunt and ACM web projects while engaging prospective members and industry professionals.
