## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, SQL, HTML5, CSS  
**Backend:** Django, FastAPI, Spring Boot  
**Frontend:** React, Tailwind CSS, Three.js  
**Databases:** PostgreSQL, MySQL  
**Tools:** Postman, DBeaver, ModelsLab, Docker, Unreal Engine, GitHub, VS Code

## EDUCATION

Georgia Southern University – Statesboro, GA  
Bachelor of Science in Computer Science, May 2026

## EXPERIENCE

**AI Model Generation Team Lead – Capstone** Jan 2026 – May 2026  
*Gulfstream Aerospace Corporation* Savannah, GA

- Led development of an AI-powered 3D asset generation platform using FastAPI, React, Three.js, Blender, and Unreal Engine 5.
- Collaborated with Gulfstream stakeholders and 3D designers to translate visualization bottlenecks, schedule constraints, and asset-preparation requirements into scalable technical features.
- Built backend integrations for TRELIS, TripoSR, and ModelsLab to support image-to-3D and text-to-3D workflows, reducing initial 3D draft generation from multi-hour manual workflows to under 60 seconds.
- Implemented glTF 2.0 export and Blender-based mesh normalization for centering, scaling, transformation, and Unreal Engine asset preparation and Remote Control API support.
- Implemented an interactive 3D visualization tool with React and Three.js for mesh inspection, frontend transformation for quick adjustments with real-time metadata, and material previewing.

**Trainline | Django, React, PostgreSQL, Docker** Spring 2025 - Present  
*Self*

- Designed and containerized a full-stack train-booking platform across React, Django REST Framework, and PostgreSQL, supporting authentication, trip discovery, seat selection, booking, payment validation, notifications, and in-app chat.
- Devised RESTful CRUD and relational data models for train schedules, user accounts, reservations, tickets, seating, accommodations, and payment workflows.
- Hardened application security and deployment through environment-based secret management, authorization controls, input validation, security headers, and documented Docker setup.

**Student Assistant (Lead)** September 2022 – December 2023  
*Georgia State University (Piedmont North)* Atlanta, GA

- Led and trained a 10+ member dining services team, improving efficiency and safety compliance.

## PROJECTS

**meeting-to-tasks | FastAPI, FAISS, Ollama, GitHub REST API** Fall 2025

- Built a local-first application that converts meeting transcripts into structured GitHub issues containing action items, blockers, decisions, owners, and follow-up tasks.
- Implemented a retrieval-augmented generation pipeline using Sentence Transformers and FAISS to retrieve relevant transcript context for a locally hosted Phi-3 Mini model through Ollama.
- Integrated FastAPI with the GitHub REST API to validate generated issue data and automate repository issue creation without sending meeting content to external AI services.

**Flight Booking Web App | Spring Boot, PostgreSQL, HTML/CSS** Fall 2024

- Designed a normalized PostgreSQL schema for users, flights, seats, bookings, and authentication, enforcing relational integrity through primary and foreign-key constraints.
- Developed a Spring Boot web application supporting flight discovery, seat selection, and booking workflows through database-backed services and server-rendered interfaces.
