PROFESSIONAL SUMMARY

Full-stack software engineer with backend depth in Python, Django, FastAPI, PostgreSQL, React, and Docker. Builds tested systems spanning REST APIs, data integrity, containerized environments, applied AI, and interactive 3D workflows. Translates stakeholder requirements and applies engineering judgement to evolving problems, gauging emerging technologies and selecting practical, reliable solutions for the constraints at hand.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL | **Backend:** FastAPI, Django, Node.js, Spring Boot, Postman
Frontend: React, CSS, Three.js | **Data / Tools:** WSL, Docker, PostgreSQL, Git/GitHub, Unreal Engine 5

EDUCATION

Georgia Southern University - Statesboro, GA

May 2026

Bachelor of Science in Computer Science

EXPERIENCE

Technical Team Lead (Gulfstream Aerospace Sponsored Capstone)

Jan 2026 - May 2026

Gulfstream Aerospace Corporation

Savannah, GA

- Defined the platform's technical approach and led a 5-person team building an AI-assisted 3D asset-generation platform with FastAPI, React, Three.js, Blender, and Unreal Engine 5, translating Gulfstream stakeholder requirements into generation, mesh-processing, inspection, and engine-integration workflows.
- Integrated TRELIS, TripoSR, and ModelsLab across local and cloud text-to-3D and image-to-3D workflows, reducing time to a successful initial draft from multiple hours to under five minutes.
- Streamlined 3D asset workflows by implementing Blender normalization tools, glTF 2.0 compatibility checks, and React-based dynamic mesh handling export to Unreal Engine through the Web Remote Control API.

Student Assistant (Lead)

Sep 2022 - Dec 2023

Georgia State University (Piedmont North)

Atlanta, GA

- Led and trained a 10+ member dining-services team during high-volume operations, maintaining service quality, inventory availability, punctuality, and safety compliance.

PROJECTS

Trainline | React, Django REST Framework, PostgreSQL, Docker

Aug 2025 - Present

- Built and containerized a full-stack train-booking platform covering authentication, trip discovery, guarded seat selection, booking, payment validation, tickets, and notifications.
- Protected booking integrity with server-authoritative fares, ownership-based authorization, PostgreSQL transactions and row locking, and a conditional uniqueness constraint preventing conflicting active seat reservations.
- Established reproducible Docker Compose environments, health and readiness probes, demo-data seeding, and GitHub Actions CI; added 52 fast backend tests and 2 PostgreSQL integration tests with 94.6% measured branch coverage and a 90% gate.

meeting-to-tasks | FastAPI, FAISS, Ollama, GitHub REST API

Aug 2025 – Aug 2026

- Built a local-first meeting intelligence application that converts transcripts into source-grounded, reviewable task drafts and publishes approved action items as GitHub issues.
- Exposed shared retrieval and extraction services through FastAPI REST endpoints and MCP tools using Sentence Transformers, FAISS, Ollama, SQLite persistence, and GitHub REST API.

LEADERSHIP

Vice President

Aug 2025 - May 2026

Association for Computing Machinery (ACM), Georgia Southern University

Statesboro, GA

- Led planning and execution of ACM events and hackathons serving 150+ students, coordinating chapter activities, technical events, and university outreach.
- Represented ACM at organization fairs, hackathons, Career Showcase Week, demonstrating a QR scavenger hunt and chapter web projects to prospective members and industry professionals.
